

Energy Monitoring & Controlling (EMC)

Web-based solution for efficient cost-effective energy management

Saving energy – lowering costs

As part of our extensive services portfolio, our energy services offer you long term energy savings' opportunities. We support you in setting up and implementing your specific energy management system. Modular service packages are available to give full consideration to your individual needs and requirements.

Energy Monitoring & Controlling (EMC)

Only continuous logging and evaluation of energy consumption data enable you to identify energy savings potential and to assess the success of optimization measures. Reliable information about the quality of building energy consumption can be obtained by paying special attention to external influencing factors (degree days adjustments) and by making comparisons with defined set points (energy budgets).

Energy Management made Simple and Secure

Internet-based EMC offers you a solution that makes energy consumption monitoring and controlling more straightforward than ever before.

Cost-effective

- No upfront hardware/software investments.
- Maintenance of central IT infrastructure by Siemens.
- Minimal training needed.

Intuitive

- Intuitive operation via web browser.

Efficient

- Efficient, decentralized input/transmission of meter readings.
- Extensive user management depending on the know-how and access rights of your staff members.

Decentralized

- Selective access at all times and from any location.

Increased productivity

- Easy access to your energy consumption data from any internet working place.
- Meter reading reminder per email and SMS.
- Automated meter readings (optional).
- Direct input of data into EMC on location reduces necessity for manual transfer of data.

Online/remote support

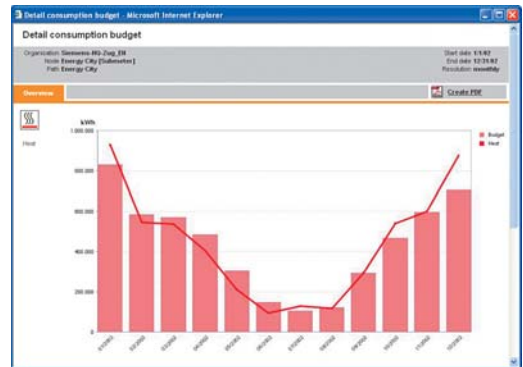

- Remote training can be held simultaneously for staff at different locations.

Modular/flexible concept

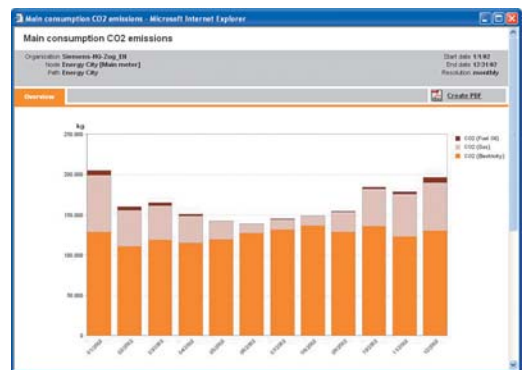

- EMC grows with your requirements/needs.

Protect your investment

- Regular back-up of all data.
- EMC is being continuously improved; upgrades to the functionality become available to customers immediately.

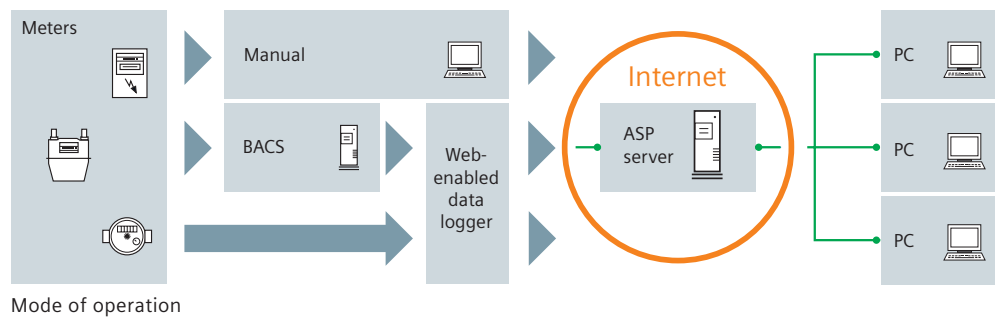

Control of consumption budgets

Monitoring emissions

Mode of operation

EMC is based on ASP (Application Service Providing) technology. This means that your consumption data are acquired by a central Siemens internet server, using your personal and secure account. Consumption data are collected either manually via a standard web browser or automatically. Your energy reports can be retrieved from any standard internet-connected PC.
