Introduction

Overview

This DICOM Conformance Statement is written according to part PS 3.2 of [1].

The applications described in this conformance statement are implemented in the Siemens SOMATOM Volume Class products using software Somaris/5 VA20A.

The Somaris/5 DICOM network implementation acts as SCU and SCP for the DICOM Verification, Storage, and Query/ Retrieve Service Classes. It acts as SCU for the DICOM Print Management Service Class, the Basic Worklist Management Service, and Study Management Service Class.

These service are described in "Part I".

The Somaris/5 DICOM Media Storage Service Class implementation acts as FSC, FSU, and FSR for the specified application profiles and the related SOP Class instances. These services are described in "Part II".

Somaris/5 is based on a Siemens common medical platform. This platform is shared with other Siemens modalities in order to provide a common look and feel and common interoperability features.

In this document parts of the Siemens common medical platform are referenced by the terms "Syngo", "MedCom", and "CSA".

As Somaris/5 is a Syngo based product, this DICOM Conformance Statement is based on the corresponding Syngo template [2].

Audience

This document is intended for hospital staff, health system integrators, hospital IT-managers, and software designers or implementors. It is assumed that the reader has a working understanding of DICOM.

Connectivity and Interoperability

The implementation of the Somaris/5 DICOM interface has been carefully tested to assure correspondence with this Conformance Statement. But the Conformance Statement and the DICOM standard do not guarantee interoperability of Siemens modalities and modalities of other vendors. The user must compare the relevant Conformance Statements and if a successful interconnection should be possible, the user is responsible to specify an appropriate test suite and to validate the interoperability, which is required. A network environment may need additional functions out of the scope of DICOM.

CHAPTER
A.1 Implementation Model

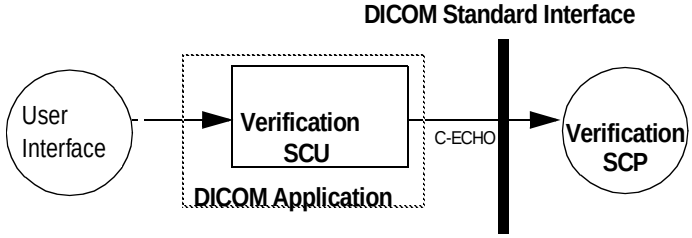
Verification

The Verification service class defines an application-level class of service which allows for the operator to verify the ability of an application on a remote node to respond to DICOM messages. The DICOM Service Tool application supports the Verification service to act as SCU.

The other direction – responding to Verification requests from remote applications – is handled by the Storage SCP application.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU for the Verification service.



Functional Definitions of Application Entities

The DICOM Service Tool application opens an association to an application on the remote node and sends a Verification message to verify that the remote application can respond to DICOM messages.

Sequencing of Real-World Activities

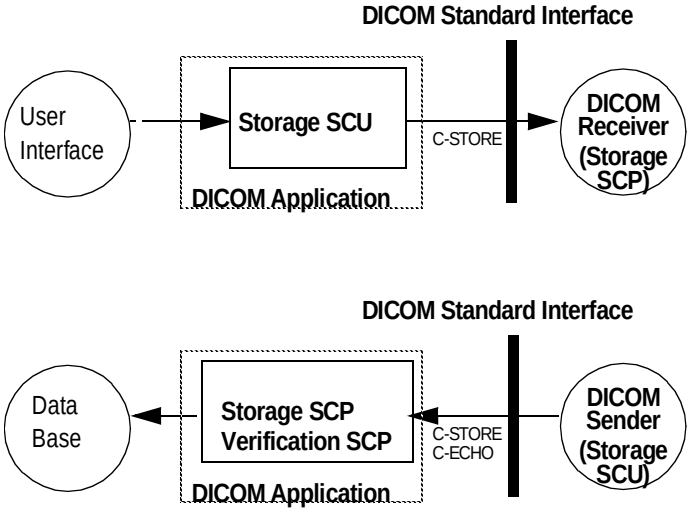
not applicable.

Storage

The Somaris/5 DICOM Application Entity originates associations for Storage of DICOM Composite Information Objects in Remote Application Entities.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU and SCP for the C-STORE DICOM network service and as SCP for the C-ECHO DICOM network service.



Functional Definitions of Application Entities

All SCP components of the Siemens Somaris/5 DICOM application are operating as background daemon processes. They are existing, when the machine is powered on and waiting for tasks.

Sequencing of Real-World Activities

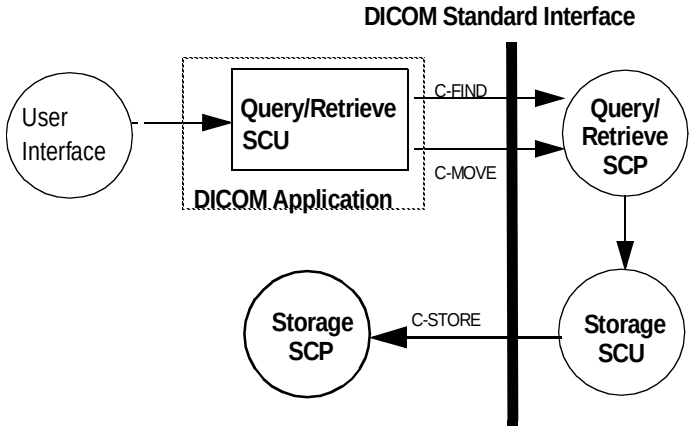
not applicable.

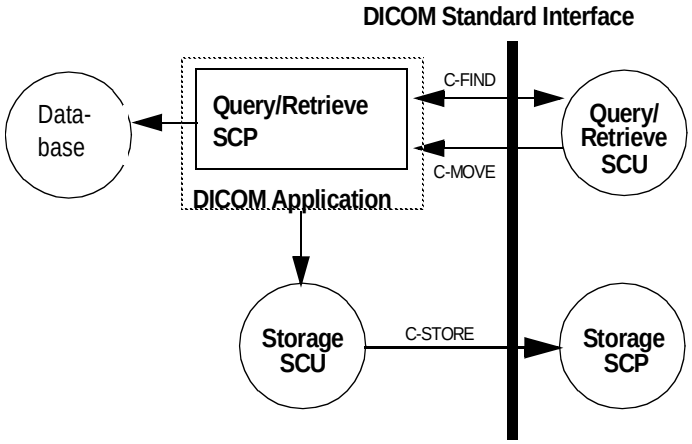
Query/Retrieve

The query/retrieve service class defines an application-level class of services which facilitates the management of images and patient data against the well defined information model of DICOM and allows a DICOM AE to retrieve images from a remote DICOM node or to request a remote DICOM AE to initiate a transfer of images to another DICOM AE. The DICOM query/retrieve application supports the query/retrieve services to act as SCU and SCP.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU and SCP for the query/retrieve network service.





Functional Definitions of Application Entities

The query/retrieve SCU requests the query/retrieve SCP to perform a match to the keys specified in the request and a C-MOVE DIMSE service initiates a C-STORE suboperation to transfer an image from a Storage SCU to a Storage SCP.

The query/retrieve SCP responds to C-FIND DIMSE services and a C-MOVE involves the Somaris/5 DICOM query/retrieve SCP application to initiate a C-STORE suboperation to a Storage SCP.

All components of the Somaris/5 DICOM query/retrieve SCP application are operating as background daemon processes. They are existing, when the machine is powered on and respond to queries based on the records stored in its database.

Sequencing of Real-World Activities

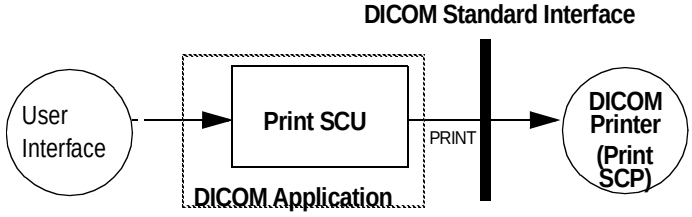
Not applicable.

Print

The Print Management Service Classes define an application-level class of services which facilitate the printing of images on a hardcopy medium. The print management SCU and print management SCP are peer DICOM print management application entities. The DICOM print application supports the print management DIMSE services to act as SCU.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU for the print management network service.



Functional Definitions of Application Entities

The user invokes a print job and the SCU uses the SOP classes of a film session, a film box and image boxes for acquiring all the information which is required for a film session. The N-ACTION is used to print the film session. The DIMSE services of the Printer SOP Class and the Print Job SOP Class allow the SCU to control the print jobs and printer status informations of the SCP.

Sequencing of Real-World Activities

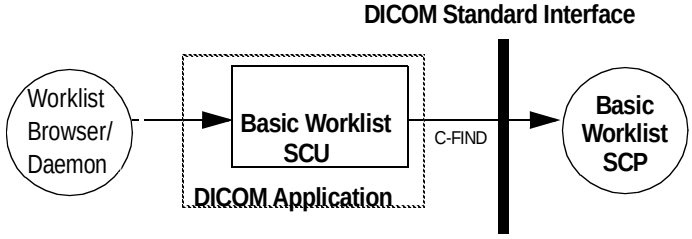
Not applicable.

Basic Worklist

The basic worklist service class defines an application-level class of service which facilitates the transfer of worklists from the information system to the imaging modality. The worklist is queried by the AE and supplies the SCU with the scheduled tasks which have to be performed on the modality. The DICOM worklist application supports the worklist service to act as SCU.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU for the worklist network service.



Note: It is configurable to get the worklist updates either automatically (in a configurable time interval) or manually (initiated by the user).

Functional Definitions of Application Entities

The basic worklist SCU requests the worklist SCP to perform a match to the keys specified in the C-FIND DIMSE service.

The worklist SCP responses to the C-FIND query and sends scheduled imaging service requests and patient demographic information from the information system to the modality.

Sequencing of Real-World Activities

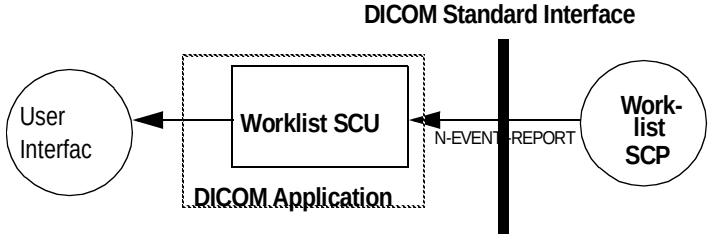
Not applicable.

Worklist

The Study Management service class defines an application-level class of service which facilitates the receiving of study scheduled notifications. A worklist is sent by the information system and supplies the SCU with the scheduled tasks which have to be performed on the modality. The DICOM worklist application supports the worklist service to act as SCU.

Application Data Flow Diagram

The Somaris/5 DICOM network implementation is a Windows NT application and acts as SCU for the worklist network service.



Functional Definitions of Application Entities

The worklist SCP sends the study which is scheduled for an examination at the modality via the N-EVENT-REPORT DIMSE service.

The worklist SCU responds to the N-EVENT-REPORT request and gets all Patient, Study and Visit information for the specified study from the information system.

Sequencing of Real-World Activities

Not applicable.

CHAPTER A.2

Application Entity Specifications

Association Establishment Policies

General

The configuration of the Somaris/5 DICOM application defines the Application Entity Titles, the port numbers and of course the host name and net address.

Number of Associations

The Somaris/5 DICOM application initiates several associations at a time, one for each transfer request being processed.

Asynchronous Nature

The Somaris/5 DICOM implementation does not support asynchronous communication (multiple outstanding transactions over a single association).

Implementation Identifying Information

The Somaris/5 DICOM implementation provides a single Implementation Class UID of

- "1.3.12.2.1107.5.1.3"

and an Implementation Version Name of

- "SIEMENS_S5VA20A".

Association Initiation by Real-World Activity

The Somaris/5 DICOM application attempts to initiate a new association for

- ❑ DIMSE C-STORE

service operations.

Real-World Activity - Storage SCU

Associated Real-World Activity - Storage SCU

The associated Real-World activity is a C-STORE request initiated by an internal daemon process. If the process successfully establishes an association to a remote Application Entity, it will transfer each image one after another via the open association. If the C-STORE Response from the remote Application contains an error status the association is aborted.

JPEG compression transfer syntaxes are supported only for Monochrome images (Photometric Interpretation = “MONOCHROME1” or “MONOCHROME2”)

SOP Specific Conformance Statement - Storage SCU

The DICOM images created by Somaris/5 DICOM application conform to the DICOM IOD definitions (Standard Extended IODs). But they will contain additional private elements which have to be discarded by a DICOM system when modifying the image.

The DICOM nodes are responsible for data consistency when modifying images. All unknown private attributes have to be removed upon modification!

Somaris/5 does not change private attributes if no modification is done. But during a *Save as new* operation nearly all private attributes will be removed.

Image Pixel Attribute Description for Grayscale Images

The Somaris/5 DICOM application supports the MONOCHROME1 and MONOCHROME2 photometric interpretation pixel format and graphic overlay with unsigned integer and 8 or 16 bits allocated. Possible values:

Pixel plane

- ❏ samples per pixel (attribute 0028, 0002) = 1
- ❏ photometric interpretation (attribute 0028,0004) = “MONOCHROME1”
- ❏ photometric interpretation (attribute 0028,0004) = “MONOCHROME2”
- ❏ pixel representation (attribute 0028, 0103) = 0

Association Acceptance Policy

The Somaris/5 DICOM application attempts to accept a new association for

- ❏ DIMSE C-ECHO
- ❏ DIMSE C-STORE

Note

JPEG compression transfer syntaxes are supported only for Monochrome images (Photometric Interpretation = "MONOCHROME1" or "MONOCHROME2")

SOP Specific Conformance Statement - Storage SCP

The Somaris/5 DICOM application conforms to the Full Storage Service Class at Level 2 - with the exception that private Sequences (private elements with VR=SQ) are not supported in Explicit VR Transfer syntax and will be ignored. When private Sequences are received in implicit VR then the whole sequence is stored as one binary element of VR=OW.

In the event of a successful C-STORE operation, the image has successfully been written on disk in the Siemens CSA image format.

The DICOM receiver returns the status Success upon successful operation otherwise one of the following status codes is returned and the association aborted:

- Refused (A700):
  This error status indicates a lack of Resources (e.g. not enough disk space) on the Somaris/5 modality.
- Error (A900 or C000):
  An error occurred while processing the image which makes it impossible to proceed. The image will not be stored and the association aborted.

If an image with the same SOP Instance UID (as that image being received) is already present in the database then the received image will be ignored. So if a remote node sends twice the same image (same SOP Instance UID) then there will still be only one image (the first) in the database of the DICOM receiver.

The Somaris/5 DICOM receiver can receive all kinds of different image formats. But for Display of such images the following restrictions apply:

Image Pixel Attribute Acceptance Criterion for Grayscale Images

The Display application accepts the MONOCHROME1 and MONOCHROME2 photometric interpretation pixel format and graphic overlay with unsigned integer and 8 or 16 bits allocated. Accepted values:

Pixel plane
- ❏ samples per pixel (attribute 0028, 0002) = 1
- ❏ photometric interpretation (attribute 0028,0004) = "MONOCHROME1"
- ❏ photometric interpretation (attribute 0028,0004) = "MONOCHROME2"
- ❏ pixel representation (attribute 0028, 0103) = 0 (unsigned)
- ❏ bits allocated (attribute 0028, 0100) = 8, 16
- ❏ bits stored (attribute 0028,0101) = 8, 10, 12
- ❏ high bit (attribute 0028,0102) = 7, 9, 11

Overlay plane
- ❏ overlay type (attribute 60xx, 0040) = “G”
- ❏ overlay bits allocated (attribute 60xx, 0100) = 16
- ❏ overlay bit position (attribute 60xx, 0102) = 12, 13, 14, 15

Overlay plane
- ❏ overlay type (attribute 60xx, 0040) = “G”
- ❏ overlay bits allocated (attribute 60xx, 0100) = 1
- ❏ overlay bit position (attribute 60xx, 0102) = 0
- ❏ overlay data (attribute 60xx, 3000) = supported.

The Somaris/5 DICOM application accepts also the MONOCHROME1 and MONOCHROME2 photometric interpretation pixel format with binary 2’s complement integer and 16 bits allocated. Accepted values:

Pixel plane
- ❏ samples per pixel (attribute 0028, 0002) = 1
- ❏ photometric interpretation (attribute 0028,0004) = "MONOCHROME1"
- ❏ photometric interpretation (attribute 0028,0004) = "MONOCHROME2"
- ❏ pixel representation (attribute 0028, 0103) = 1 (signed)
- ❏ bits allocated (attribute 0028, 0100) = 16
- ❏ bits stored (attribute 0028,0101) = 16
- ❏ high bit (attribute 0028,0102) = 15

Overlay plane
- ❏ overlay type (attribute 60xx, 0040) = “G”
- ❏ overlay bits allocated (attribute 60xx, 0100) = 1
- ❏ overlay bit position (attribute 60xx, 0102) = 0
- ❏ overlay data (attribute 60xx, 3000) = supported.

For MOD LUT both the linear LUT (Rescale Slope/Intercept) and the MOD LUT SQ are supported and considered when pixel data is displayed. However there are two limitations. The MOD LUT SQ will be ignored in the following cases:

- ⇨ signed pixels
- ⇨ the pixel format is changed by the MOD LUT (e.g. 8 bit -> 16 bit)

If the MOD LUT SQ contains multiple LUTs then only the first one is used.

For VOI LUT also both the linear LUT (Window Center/Width) and the VOI LUT SQ are supported (VOI LUT SQ with 8 or 16 bit LUT data).
But if both a VOI LUT SQ and a linear MOD LUT are specified within one image then the value for Rescale Slope is restricted to 1.

If the VOI LUT SQ contains multiple LUTs then only the first one is used.

The Display application supports only rectangular Shutters in this version. Images with other shutter types will be displayed without Shutter.

Image Pixel Attribute Acceptance Criterion for Color Images

The Siemens Display application supports the RGB color image description with the unsigned integer 24 bit color image plane pixel format. Accepted values:

- ❏ samples per pixel (attribute 0028, 0002) = 3
- ❏ photometric interpretation (attribute 0028,0004) = “RGB”
- ❏ pixel representation (attribute 0028, 0103) = 0
- ❏ bits allocated (attribute 0028, 0100) = 8
- ❏ bits stored (attribute 0028,0101) = 8
- ❏ high bit (attribute 0028,0102) = 7
- ❏ planar configuration (attribute 0028,0006) = 0 (pixel interleave)

The Somaris/5 DICOM application supports the “Palette Color” color image description with unsigned integer and 2’s complement pixel format:

- ❏ samples per pixel (attribute 0028, 0002) = 1
- ❏ photometric interpretation (attribute 0028,0004) = “PALETTE COLOR”
- ❏ pixel representation (attribute 0028, 0103) = 0
- ❏ bits allocated (attribute 0028, 0100) = 8, 16
- ❏ bits stored (attribute 0028,0101) = 8, 16
- ❏ high bit (attribute 0028,0102) = 7, 15

Both 8bit and 16bit palettes are supported - but no Segmented Palette Color LUTs.

Presentation Context Acceptance Criterion - Storage SCP

The Somaris/5 DICOM application will accept any number of Verification or storage SOP classes that are listed above. There is no limit on the number of presentation contexts accepted except for the DICOM limit. In the event that the Siemens Somaris/5 DICOM application runs out of resources, it will reject the association request.

Transfer Syntax Selection Policies - Storage SCP

The Somaris/5 DICOM application supports

- the Implicit VR Little Endian, the Explicit VR Little Endian and Explicit VR Big Endian transfer syntaxes
- the JPEG Baseline and JPEG Extended transfer syntaxes (JPEG lossy).
- the JPEG lossless Non-Hierarchical transfer syntax.

Any proposed presentation context which includes one of these transfer syntaxes will be accepted. Any proposed presentation context that does not include one of these transfer syntaxes will be rejected.

Query/Retrieve AE Specification

The Query/Retrieve SCU request that the remote SCP perform a match of all keys specified in the request, against the information in its database and the identified images will be moved or retrieved to the same or a different storage association.

The Query/Retrieve SCP responds to queries based on the records based on its database and images will be send to the requesting SCU or to a different storage destination.

Somaris/5 DICOM application provides Standard Conformance to the following DICOM V3.0 SOP Classes as SCU and SCP:

SOP Class Name	SOP Class UID

Association Establishment Policies

General

The configuration of the Somaris/5 DICOM query/retrieve application defines the Application Entity Titles, the port numbers and of course the host name and net address.

Number of Associations

The Somaris/5 DICOM application initiates several association at a time, one for each query/retrieve request being processed.

Asynchronous Nature

The Somaris/5 DICOM implementation does not support asynchronous communication (multiple outstanding transactions over a single association).

Implementation Identifying Information

The Somaris/5 DICOM implementation provides a single Implementation Class UID of

- ❏ “1.3.12.2.1107.5.1.3"

and an Implementation Version Name of

- ❏ “SIEMENS_S5VA20A”.

Association Initiation Policy

The Query/Retrieve SCU and SCP establish an association by using the DICOM association services. During association establishment the Query/Retrieve application entities negotiate the supported SOP classes to exchange the capabilities of the SCU and the SCP.

The following DIMSE-C operations are supported as SCU:

- ❏ C-FIND
- ❏ C-MOVE

Real-World Activity - Find SCU

Associated Real-World Activity - Find SCU

The associated Real-World activity is to initiate query request to an SCP with the query models Patient Root and Study Root.

Proposed Presentation Contexts - Find SCU

The Somaris/5 DICOM Query application will propose Presentation Contexts as shown in the following table:

Presentation Context Table

Abstract Syntax		Transfer Syntax		Role	Extended

		DICOM Explicit VR Big Endian Transfer Syntax	1.2.840.10008.1.2.2		

It is configurable which of the two query models (or both) are to be used by the Siemens Query SCU application.

Note

C-FIND Extended Negotiation is NOT supported by the SCU.

SOP Specific Conformance Statement - Find SCU

The Somaris/5 DICOM Query/Retrieve SCU supports hierarchical queries with all mandatory search keys. The following tables describe the search keys for the different query models that the Siemens Query application supports as an SCU:

Real-World Activity - Move SCU

Associated Real-World Activity - Move SCU

The operator uses the Somaris/5 DICOM Query application to enter the query values and then initiates the retrieval of all matching DICOM composite objects (like images) from the remote node.

This will generate retrieval requests to a remote C-MOVE SCP using the C-MOVE operation with the query model Patient Root and Study Root. The Storage Service Class Conformance Statement of the SCP must describe the C-STORE service which is generated by the C-MOVE service.

Proposed Presentation Contexts - Move SCU

The Somaris/5 DICOM application will propose Presentation Contexts as shown in the following table:

Presentation Context Table

The Move SCU interprets following status codes:

Association Acceptance Policy

The Query/Retrieve SCU and SCP establish an association by using the DICOM association services. During association establishment the Query/Retrieve application entities negotiate the supported SOP classes to exchange the capabilities of the SCU and the SCP.

The following DIMSE-C operations are supported as SCP:

- ❏ C-FIND
- ❏ C-MOVE
- ❏ C-FIND-CANCEL

The SCP does support multiple C-FIND-requests over the same association, but not multiple C-MOVE requests.

> **Note**
>
> While physically writing to CD-R, Association Requests will be rejected to avoid problems on storing data caused by network activities.

Real-World Activity - Find SCP

Associated Real-World Activity - Find SCP

The associated Real-World activity is to respond to query requests to an SCU with the query model Patient Root, Study Root and Patient/Study Only.

Proposed Presentation Contexts - Find SCP

The query attributes will be treated Case Sensitive.

In DICOM wildcard queries the symbol '?' is treated as '*' by Find SCP.
So a wildcard query with "?abc*" is actually treated as "*abc*"

The C_FIND_RSP message will contain the following attributes:

- ❏ Specific Character Set (0008,0005)
- ❏ Query/Retrieve Level (0008,0052) from the C_FIND_RQ
- ❏ Retrieve AE Title (0008,0054):
  this value is NULL except for the lowest level of the query model (Image level for Patient Root or Study Root and Study level for Patient/Study Only)
- ❏ Storage-Media File-set ID (0088,0130) at level study, series and image. If Storage-Media File-set ID is not present a NULL value will be returned.
- ❏ attributes requested by C_FIND_RQ

A remote DICOM AE can cancel the query by sending a C_CANCEL_FIND_RQ message. If the Find SCP receives C_CANCEL_FIND_RQ before it has completed the processing of the matches it stops the database matching process and returns a status of Cancelled to the remote DICOM AE.

The Find SCP returns following status codes:

C-FIND return status

Service Status	Meaning	Protocol Codes	Related Fields
Refused	Out of Resources	A700	(0000,0902)
Failed	Identifier does not match SOP Class	A900	(0000,0901) (0000,0902)
	Unable to process	C001	(0000,0901) (0000,0902)
Cancel	Matching terminated due to Cancel request	FE00	None
Success	Matching is complete - No final Identifier is supplied	0000	None
Pending	Matches are continuing – Current Match is supplied and any Optional Keys were supported in the same manner as Required Keys	FF00	Identifier
	Matches are continuing – Warning that one or more Optional Keys were not supported for existence and/or matching for this identifier	FF01	Identifier

Real-World Activity - Move SCP

Associated Real-World Activity - Move SCP

The associated Real-World activity is to respond to retrieve requests to an SCU. The SCP supports the query model Patient Root, Study Root and Patient/Study Only. The Storage Service Class Conformance Statement describes the C-STORE service which is generated by the C-MOVE service.

Proposed Presentation Contexts - Move SCP

The Somaris/5 DICOM application will propose Presentation Contexts as shown in the following table:

Note

C-MOVE Extended Negotiation will be NOT supported by the SCP.

SOP Specific Conformance Statement - Move SCP

At association establishment time the C-MOVE presentation context shall be negotiated. The C-STORE sub-operations is done on a different association, specified in the C-MOVE request, to transfer images to another SCP of the Storage Service Class.

Note

In DICOM wildcard queries the symbol '?' is treated as '*' by Find SCP.
So a wildcard query with "?abc*" is actually treated as "*abc*"

The Move SCP returns following status codes:

Print AE Specification

The print management SCU invokes print management DIMSE services to transfer images from the local AE to the remote SCP AE to print the images with the defined film format and size on a selected network DICOM hardcopy printer. See DICOM part 4 annex H.

Somaris/5 DICOM implementation provides Standard Conformance to the following DICOM V3.0 Basic Grayscale Print Management Meta SOP Class, and the optional Print Job SOP Class as an SCU:

Basic Grayscale Print Management Meta SOP Class	1.2.840.10008.5.1.1.9	M/M
– Basic Film Session SOP Class	1.2.840.10008.5.1.1.1	M/M
– Basic Film Box SOP Class	1.2.840.10008.5.1.1.2	M/M
– Basic Grayscale Image Box SOP Class	1.2.840.10008.5.1.1.4	M/M

Association Establishment Policies

General

The configuration of the Somaris/5 DICOM print management SCU defines the Application Entity Titles, the port numbers and of course the host name and net address.

Number of Associations

The Somaris/5 DICOM application initiates one/several association(s) at a time, one for each transfer request being processed.

Asynchronous Nature

The Somaris/5 DICOM implementation does not support asynchronous communication (multiple outstanding transactions over a single association).

Implementation Identifying Information

The Somaris/5 DICOM implementation provides a single Implementation Class UID of

- "1.3.12.2.1107.5.1.3"

and an Implementation Version Name of

- "SIEMENS_S5VA20A".

Association Initiation Policy

The Print Management SCU and SCP establish an association by using the DICOM association services. During association establishment the Print Management application entities negotiate the supported SOP classes to exchange the capabilities of the SCU and the SCP. If the SCU supports only mandatory SOP classes, the negotiation of optional capabilities is not necessary.

Real-World Activity

Associated Real-World Activity

The associated Real-World activity is to print over a network a set of images on a film sheet with one or more copies. The images are converted to Standard\1-1. If the response from the remote application contains a status other than Success or Warning the association is aborted.

Proposed Presentation Contexts

The Somaris/5 DICOM application will propose Presentation Contexts as shown in the following table:

SOP Specific Conformance Statement

The Somaris/5 DICOM SCU conforms to the DICOM Basic Grayscale Print Management Meta SOP Class.

The application uses a setting platform to define the properties of the connected DICOM SCP, e.g.:

- ❏ maximum number of print jobs in the queue
- ❏ maximum number of print copies
- ❏ supported film sizes of the connected DICOM SCP
- ❏ supported film formats of the DICOM SCP
- ❏ lookup table definition.

The printing is only suspended in the case of a failure return status of the SCP.

SOP Specific Conformance to Basic Film Session SOP Class

The Basic Film Session information object definition describes all the user defined parameter which are common for all the films of a film session. The Basic Film Session refers to one or more Basic Film Boxes and that are printed on one hardcopy printer.

The Somaris/5 DICOM Print application supports the following DIMSE Service Elements for the Basic Film Session SOP class as SCU:

- ❏ N-CREATE
- ❏ N-DELETE

The Basic Film Session SOP class N_CREATE_RQ (SCU) uses following attributes:

Attribute name	Tag	Usage SCU	Supported Values
Number of Copies	(2000,0010)	U	
Medium Type	(2000,0030)	U	BLUE FILM CLEAR FILM PAPER
Film Destination	(2000,0040)	U	MAGAZINE PROCESSOR

The Affected SOP Instance UID received in N_CREATE_RSP message from SCP will be saved internally and used for later requests like N_DELETE_RQ on the Basic Film Session SOP Class - see table below:

Attribute name	Tag	Source of information
Requested SOP Instance UID	(0008,0018)	Affected SOP Instance UID of N_CREATE_RSP on Basic Film Session

The N_DELETE_RQ on the Basic Film Session SOP Class is used to delete the complete Basic Film Session SOP Instance hierarchy.

The Basic Film Session SOP class interprets following status codes (from N_CREATE_RSP, N_DELETE_RSP messages):

Service Status	Meaning	Protocol Codes
Failure	Film session SOP instances hierarchy does not contain film box SOP instances	C600
	Unable to create print job, print queue is full	C601
	Image size is larger than images box size	C603
Warning	Memory allocation not supported	B600
	Film session printing is not supported	B601
Warning	Film box does not contain image box (empty page)	B602
Success	Film belonging to the film session are accepted for printing	0000

SOP Specific Conformance to Basic Film Box SOP Class

The Basic Film Box information object definition describes all the user defined parameter of one film of the film session. The Basic Film Box information description defines the presentation parameters which are common for all images on a given sheet of film.

The Basic Film Box refers to one or more Image Boxes.

Supported as SCU are:

- ❏ N-CREATE
- ❏ N-ACTION
- ❏ N-DELETE

The Basic Film Box SOP class N_CREATE_RQ message uses following attributes (the used values for each attribute depend how the DICOM Printer is configured within the Siemens product):

Attribute name	Tag	Usage SCU	Supported Values
Image Display Format	(2010,0010)	M	STANDARD\1-1
Referenced Film Session Sequence	(2010,0500)	M	
>Referenced SOP Class UID	(0008,1150)	M	1.2.840.10008.5.1.1.1
>Referenced SOP Instance UID	(0008,1155)	M	
Film Orientation	(2010,0040)	M	PORTRAIT
Film Size ID	(2010,0050)	M	8INX10IN 10INX14IN 11INX14IN 14INX14IN 14INX17IN 24CMX24CM 24CMX30CM
Magnification Type	(2010,0060)	M	BILINEAR CUBIC NONE REPLICATE

The N_CREATE_RSP message from the SCP then contains the References Image Box Sequence with its SOP Class and Instance UIDs which is stored internally and then used for the Basic Image Box SOP Class N-SET RQ messages.

After all parameters for the Image boxes on the filmsheet have been set then the Somaris/5 DICOM print application SCU will issue a N_ACTION_RQ message with the SOP Instance UID of the Basic Film Box (returned in N_CREATE_RSP of Basic Film Box SOP class) and the Action Type ID set to 1.

The Affected SOP Instance UID received in N_CREATE_RSP message from SCP will be saved internally and can be used later for N_DELETE_RQ request on the Basic Film Box SOP Class - see table below:

Attribute name	Tag	Source of information
Requested SOP Instance UID	(0008,0018)	Affected SOP Instance UID of N_CREATE_RSP on Basic Film Box

The Basic Film Box SOP class interprets following status codes from the N_CREATE_RSP, N_DELETE_RSP and N_ACTION_RSP messages:

Service Status	Meaning	Protocol Codes
Failure	Unable to create print job; print queue is full	C602
	Image size is larger than image box size	C603
Warning	Film box does not contain image box (empty page)	B603
	Requested MinDensity or MaxDensity outside of printer's operating range	B605
Success	Film accepted for printing	0000

SOP Specific Conformance to Basic Grayscale Image Box SOP Class

The Basic Grayscale Image Box information object definition is the presentation of an image and image related data in the image area of a film. The Basic Image Box information describes the presentation parameters and image pixel data which apply to a single image of a sheet of film.

The Grayscale Image Box SOP class uses only the N_SET_RQ with the following attributes

Attribute name	Tag	Usage SCU	Supported Values
Image Position	(2020,0010)	M	1
Basic Grayscale Image Sequence	(2020,0110)	M	
>Samples Per Pixel	(0028,0002)	M	1
>Photometric Interpretation	(0028,0004)	M	MONOCHROME2 for Grayscale Images
>Rows	(0028,0010)	M	
>Columns	(0028,0011)	M	
>Pixel Aspect Ratio	(0028,0034)	M	
>Bits Allocated	(0028,0100)	M	8
>Bits Stored	(0028,0101)	M	8
>High Bit	(0028,0102)	M	7
>Pixel Representation	(0028,0103)	M	0
>Pixel Data	(7FE0,0010)	M	

The Grayscale Image Box SOP class interprets following status codes:

Service Status	Meaning	Protocol Codes
Warning	Requested MinDensity or MaxDensity outside of printer's operating range	B605
Failure	Image contains more pixel than printer can print in Image box	C603
	Insufficient memory in printer to store the image	C605
Success		0000

SOP Specific Conformance to Printer SOP Class

The Printer SOP Class is the possibility to monitor the status of the hardcopy printer in a synchronous and an asynchronous way.

The Somaris/5 DICOM Print application uses the mandatory N-EVENT Report DIMSE service to monitor the changes of the printer status in an asynchronous way

It can directly ask the Print SCP for its status or can receive Events from the Print SCP asynchronously:

- ❏ N_GET as SCU
- ❏ N_EVENT_REPORT as SCU

In this case the following information is supported:

Event type name	Event	Attributes	Tag	Usage SCU
Normal	1			
Warning	2	Printer Status Info	(2110,0020)	U
Failure	3	Printer Status Info	(2110,0020)	U

Attribute name	Tag	Usage SCP	supported values
Printer Status	(2110,0010)	M	NORMAL FAILURE WARNING
Printer Status Info	(2110,0020)	M	[a] SUPPLY LOW RECEIVER FULL NO RECEIVE MGZ FILM JAM

a. Only valid in case of Printer Status WARNING

SOP Specific Conformance to Print Job SOP Class

The Print Job SOP Class is the possibility to monitor the execution of the print process.

The Somaris/5 DICOM Print application supports the optional N-EVENT report DIMSE service to receive the changes of the print job status in an asynchronous way.

It can receive events from the Print SCP asynchronously:

❏ N-EVENT-REPORT

The following information is supported:

Event type name	Event	Attributes	Tag	Usage SCU

		Film Session Label	(2000,0050)	U
		Printer Name	(2110,0030)	U
Failure	4	Execution Status Info	(2100,0030)	U

Worklist AE Specification

The worklist SCU is receiving the worklist information (study scheduled information) of a patient to be examined at the modality from the remote SCP.

Somaris/5 DICOM implementation provides Standard Conformance to the following DICOM V3.0 SOP Class as an SCU:

SOP Class Name	SOP Class UID
Study Management	1.2.840.10008.3.1.2.3.1

Association Establishment Policies

General

The configuration of the Somaris/5 DICOM study management application defines the Application Entity Titles, the port numbers and of course the host name and net address.

Number of Associations

The Somaris/5 DICOM application initiates one/several association(s) at a time, one for each transfer request being processed.

Asynchronous Nature

The Somaris/5 DICOM implementation does not support asynchronous communication (multiple outstanding transactions over a single association).

Implementation Identifying Information

The Somaris/5 DICOM implementation provides a single Implementation Class UID of

❏ “1.3.12.2.1107.5.1.3"

and an Implementation Version Name of

❏ “SIEMENS_S5VA20A”.

Association Initiation Policy

The worklist SCU establish an association by using the DICOM association services. During association establishment the negotiation of SOP classes to exchange the capabilities of the SCU and the SCP is not supported.

The following DIMSE-N operation is supported as SCU:

❏ N-EVENT-REPORT

Real-World Activity

Associated Real-World Activity

The associated Real-World activity is to send a study scheduled event to an SCU by using the DICOM Study Management Information Model.

CHAPTER
A.3 Communication Profiles

Supported Communication Stacks

The Somaris/5 DICOM application provide DICOM V3.0 TCP/IP Network Communication Support as defined in Part 8 of the DICOM Standard.

OSI Stack

not supported.

TCP/IP Stack

The Somaris/5 DICOM application uses the TCP/IP stack from the Windows NT system upon which it executes. It uses the MergeCOM-3 subroutine library from Merge Technologies Inc. that is based on a Berkeley socket interface.

API

The Somaris/5 DICOM application uses the MergeCOM library that is based on a TCP/IP socket interface.

Physical Media Support

The Somaris/5 DICOM application is indifferent to the physical medium over which TCP/IP executes; it inherits this from the Windows NT system upon which it executes.

Point-to-Point Stack

not supported.

Somaris/5 Attribute Interpretation

The following table lists how some attributes are set by Somaris/5:

Tag	Name	Explanation
0008,0012	Instance Creation Date	The current real-world date and time when a particular image is created.
0008,0013	Instance Creation Time	
0008,0020	Study Date	For existing studies their date and time entries are copied into the corresponding entries in a new image's header. If a new study is created the date and time entries from the first series of this new study will be used.
0008,0030	Study Time	
0008,0021	Series Date	For existing series their date and time entries are copied into the corresponding entries in a new image's header. If a new series is created the current real-world date and time will be used.
0008,0031	Series Time	
0008,0022	Acquisition Date	Acquisition Date and Time is defined as the real-world beginning of the accumulation of data which contribute to a particular image. Due to the multi-slice technology several images may have the same Acqusition Date and Time.
0008,0032	Acquisition Time	
0008,0023	Image Date	For all images which result from a reconstruction of acquired data, the time stamp is the same as Acquisition Date and Time. This is true as well as for images that were reconstructed immediately after data acquisition as well as for images that were reconstructed at any time later. For all other images created by any other means the time stamp is derived from a point in time during the creation process of these images.
0008,0033	Image Time	

Tag	Name	Explanation
0008,1030	Study Description	Is derived from information entered during patient registration or examination setup.
0008,103E	Series Description	Is derived from the parameters of the data acquisition and reconstruction process.
0018,1152	Exposure	For spiral images the product of exposure time and x-ray tube current is corrected with Table Feed per Rotation. Expressed in mAs.
0018,1190	Focal Spots	Size of the focal spot actually used to generate x-ray radiation for a particular image.This is a single value expressed in mm.
0020,1041	Slice Location	Topogram: Slice Location is defined as the relative position of the very beginning of the Topogram image expressed in mm. Tomogram: Slice Location is defined as the relative position of the center of an image's slice expressed in mm. These positions are relative to the current reference point and corresponds to the table position.
0018,0015	Body Part Examined	The Body Part Examined is derived from the body region selected for examination during patient registration or examination setup. **Body Region** — **Body Part Examined** Head — HEAD Neck — NECK Shoulder — SHOULDER Thorax — BREAST Abdomen — ABDOMEN Spine — SSPINE Pelvis — PELVIS Extremities — EXTREMITY Specials — SPECIALS n. a. — SERVICE n. a. — UNKNOWN

Tag	Name	Explanation
0018,0010	Contrast/Bolus Agent	For images created during an acquisition: The attribute is filled with the value entered during examination setup. For images created by a subsequent reconstruction after acquisition: The attribute is filled with the fixed term "APPLIED" if contrast/bolus agent information was entered during examination setup.
0020,0032	Image Position (Patient)	The x, y, and z coordinates of the upper left hand corner (upper left hand corner of the first pixel transmitted) of the image, in mm.

Private SOP class CSA Non-Image

This chapter includes the definition of the Siemens AG B Med CSA defined private Non-Image Object (called CsaNonImage IOD). The focus of this private Non-Image Object is to address the requirement for non-image data sets found in Syngo based applications.

The MedCom Non-Image Information Object Definition specifies data sets that are converted from a non-DICOM format to a modality independent DICOM format.

Examples of such manufacturer model dependent data sets are:

- ❏ Raw Data
- ❏ CT Admin Data
- ❏ MR Spectroscopy Data
- ❏ etc.

CSA Non-Image IOD Entity Relationship Model

The E-R model in [DICOM] A.1.2 depicts those components of the DICOM Information Model which directly refer to the CSA Non-Image IOD. The frame of reference IE, overlay IE, modality look up table IE, VOI lookup table IE and curve IE are not components of the CSA Non-Image IOD.

CHAPTER
A.5 Configuration

AE Title / Presentation Address Mapping

To ensure unique identification the hostname should be used for AE Titles (e. g. HRI_myhost). The string can be up to 16 characters long and must not contain any extended characters, only 7 bit ASCII characters (excluding control characters) are allowed according to DICOM standard.

Local AE Titles and Presentation Addresses

The local AE Titles can be configured using the Service application.

The following AETs can be configured:
- ❏ One common AET for Storage AE and Query/Retrieve AE.
- ❏ One common AET for Basic Worklist AE and Worklist AE.
- ❏ One AET for Print AE.

Local Storage and Query/Retrieve SCP listen on port 104.

Local Worklist SCU listens on port 106.

Remote AE Titles and Presentation Addresses

Remote AE Titles, host names and port numbers can be configured using the Service application. For each AET a list of supported services can also be configured.

Configurable Parameters

Storage and Query/Retrieve

The Service application can be used to set the AETs, port numbers, host names, IP addresses, and capabilities for the remote nodes (SCPs). The user can select transfer syntaxes, compression types, and query models for each SCP separately.

Print

The Service application can be used to configure the SCP.

AET, host name, IP address, and port number can be set.

Basic Worklist and Worklist:

The Service application can be used to set the AETs, port numbers, host names, IP addresses, capabilities, and time-outs for the remote nodes (SCPs).

Additional configurable parameters for Basic Worklist Query are:

- ❏ Query Waiting time - the time to wait for the C-FIND-RSP after sending the C-FIND-RQ (default 20 s)
- ❏ Max. Query Match Number - the maximum number of entries accepted in one worklist (default is 100)
- ❏ Query Interval - the time between two C-FIND-RQs to the Hospital Information System (default is 60 min)

Default Parameters

This configuration tool also uses some default parameters:

- ❏ maximal PDU size set to 28672 Bytes
- ❏ time-out for accepting/rejecting an association request: 240 s
- ❏ time-out for responding to an association open/close request: 240 s
- ❏ time-out for accepting a message over network: 240 s
- ❏ time-out for waiting for data between TCP/IP-packets: 240 s

The Time-outs for waiting for a Response message from the remote node are as following:

- ❏ for Storage SCP/SCU: 600 s
- ❏ for Query/Retrieve SCP/SCU: 600 s
- ❏ for Basic Worklist SCU: configurable, see → page A.5–2, *Basic Worklist and Worklist:.*
- ❏ for Print Management SCU:
  time-out for Response to N-SET-RQ: 240 s
  time-out for Response to other Requests: 60 s

CHAPTER A.6

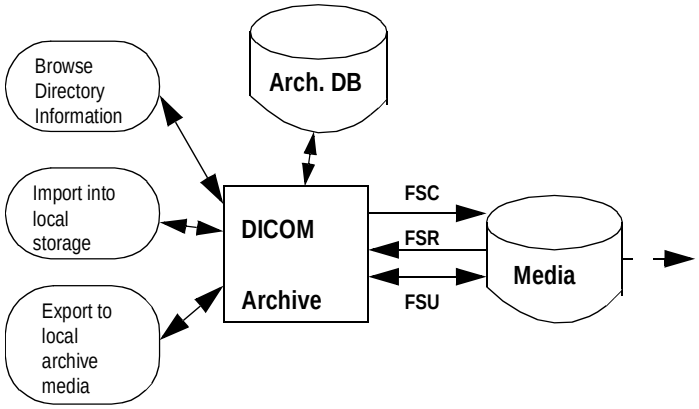
DICOM Conformance Statement

Media Storage

CHAPTER

B.1 Implementation Model

Application Data Flow Diagram



The DICOM archive application will serve as an interface to the CD-R or MOD off-line medium device. It serves interfaces to include the off-line media directory into the browser and to copy SOP instances to a medium or retrieve SOP Instances from medium into local storage.

The DICOM Archive application will support CD-R and MOD media (see Table → page B.2–1.).

The FSU role will update new SOP Instances only to media with pre-existing File-sets conforming to the Application Profiles supported.

The contents of the DICOMDIR will be temporarily stored in Archive-Database.

Functional definitions of AE's

The Somaris/5 DICOM off-line media storage application consists of the DICOM Archive application entity serving all interfaces to access off-line media. The DICOM Archive application is capable of

- ✧ creating a new File-set onto an unwritten medium.
- ✧ updating an existing File-set by writing new SOP Instances onto the medium.
- ✧ copying SOP Instances from the medium onto local storage
- ✧ reading the File-set's DICOMDIR information temporarily into database and pass it to display applications.

Sequencing of Real-World Activities

The DICOM Archive application will not perform updates before the Directory information of the DICOMDIR is completely read.

File Meta Information Options

The Implementation Class UID is:

❏ 1.3.12.2.1107.5.1.3

and an Implementation Version Name of

❏ "SIEMENS_S5VA20A"

CHAPTER B.2

Application Entity Specifications

DICOM Archive Specification

The DICOM Archive provides Standard conformance to Media Storage Service Class (Interchange Option).

	Import into local Storage	FSR	Interchange
	Export to local archive media	FSC,FSU	Interchange

Configuration of uncompressed Transfer Syntax for export will result in compatibility to the STD-GEN-CD profile.

File Meta Information for the Application Entity

The Source Application Entity Title is set by configuration. See → Chapter B.5, *Configuration* for details.

Real-World Activities for this Application Entity

Real-World Activity: Browse Directory Information

The DICOM Archive application acts as FSR using the interchange option when requested to read the media directory.

The DICOM archive application will read the DICOMDIR and insert that directory entries, which are supported, into a local database. The database can the then be used for browsing media contents.

> **Note**
>
> Icon Image SQ is also supported in DICOMDIR. But only those Icon Images with Bits Allocated (0028,0100) equal to 8 and size 64 by 64 or 128 by 128 pixels are imported into database and are visible in PatientBrowser.

Application Profiles for the RWA: Browse Directory Information

See table → page B.2–1 for the Application Profiles listed that invoke this Application Entity for the Browse Directory Information RWA.

Real-World Activity: Import into local Storage

The DICOM Archive application acts as FSR using the interchange option when requested to read SOP Instances from the medium into the local storage.

The SOP Instance selected from the media directory will be copied into the local storage. Only SOP Instances, that are supported, can be retrieved from media storage.

Application Profiles for the RWA: Import into local Storage

See table → page B.2–1 for the Application Profiles listed that invoke this Application Entity for the Copy to Local Storage RWA.

Real-World Activity: Export to local Archive Media

The DICOM Archive application acts as FSU (for media with existing DICOM file-set) or FSC (media not initialized) using the interchange option when requested to copy SOP Instances from the local storage to local Archive medium.

The DICOM Archive application will receive a list of SOP Instances to be copied to the local archive medium. According to the state of the medium inserted (new medium, Medium with DICOM file-set) the SOP Instances are either updated or created on the media. Only valid SOP Instances are accepted.

The DICOM archive application will not close the CD-R medium.

Note

While physically writing to CD-R, Association Requests received by the local Storage SCP or to the local Query SCP will be rejected to avoid problems on storing data caused by network activities.

Application Profiles for the RWA: Export to local Archive Media

See table → page B.2–1 for the Application Profiles listed that invoke this Application Entity for the Copy to local Archive RWA.

Note

If the image to be archived also has an Icon Image in the database then there will be a Icon Image SQ be generated in DICOMDIR file for this image. The Icon Image SQ will contain the following attributes:

- ❏ Samples Per Pixel (0028,0002) = 1
- ❏ Photometric Interpretation (0028,0004) = “MONOCHROME2”
- ❏ Rows (0028,0010), Columns (0028,0011) = 128,128 for XA IOD images = 64,64 for other images
- ❏ Bits Allocated (0028,0100) = 8
- ❏ Bits Stored (0028,0101) = 8
- ❏ High Bit (0028,0102) = 7
- ❏ Pixel Representation (0028,0103) = 0 (unsigned int)
- ❏ Planar Configuration (0028, 0006) is not set
- ❏ Pixel Aspect Ration (0028,0034) is not set (aspect ratio is 1/1)
