SIEMENS

» Your patients have more sophisticated demands «

It goes without saying that your main focus is on medical care, but in the future your hospital will be judged increasingly on the quality of the multimedia services offered. A personal TV and individual access to the Internet and Intranet from the bedside are already taken for granted by patients. And rightly so, as every aspect of comfort and convenience around the hospital bed contributes to a swift recovery.

» Extensive documentation, stringent security requirements and demanding patients – many challenges, one solution.

The combination of multimedia services for your patients and secure access to electronic patient records for your staff directly at the point of care enhances patient comfort and speeds up administrative processes in the hospital.

HiPath Healthcare Solution HiMed – more efficient workflow due to secure access to patient data.

Using the HiMed Cockpit, hospital staff have access to the Hospital Information System (HIS). This enables access to clinical applications and resources from the patient's bedside to call up medical records, x-rays and diagnoses, or to enter data directly into the system. Faster workflow generates a significant increase in productivity.

Greater security for patients.

Optimized, electronically aided processes reduce costs, while at the same time ensuring greater security. Notes on card files, illegible handwriting, mistakes and errors are a thing of the past.

Greater security for sensitive data.

Medical staff have to identify themselves by means of a smartcard, guaranteeing that only authorized persons can gain access to the data and patient records.

Higher revenue from attractive patient services.

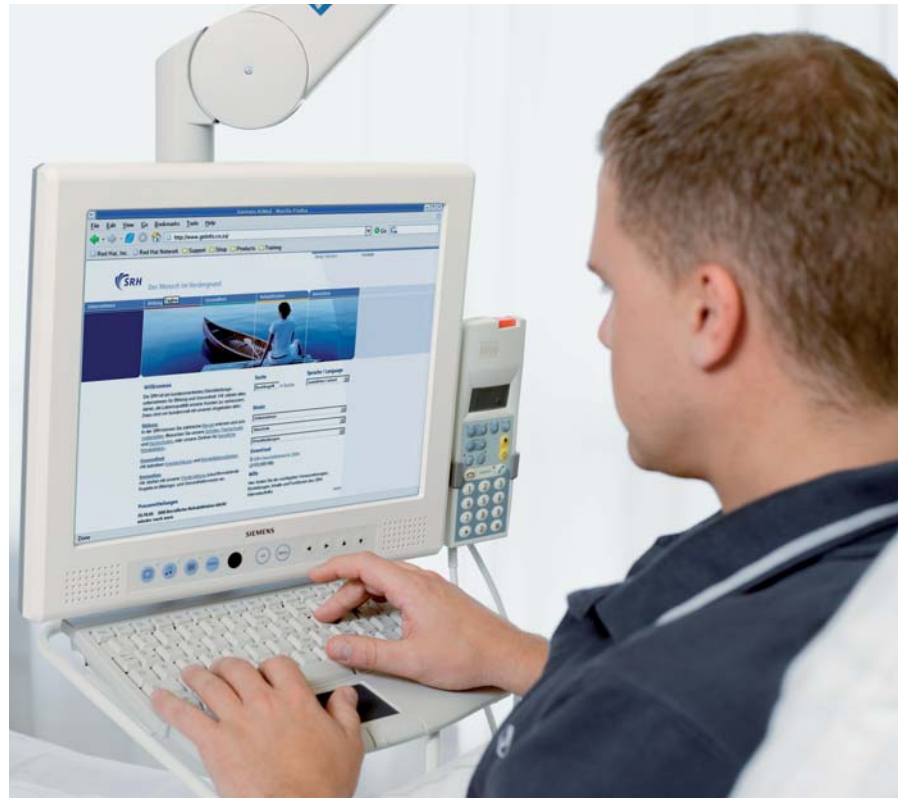

The HiMed Cockpit at the bedside offers everything to make the stay as pleasant as possible for the patient: TV, Internet, Intranet, radio, telephone, lighting controls and nurse call button. All functions are extremely easy to operate. Patients appreciate the multimedia services on offer and are happy to use them. All services are paid for using the HiMed smartcard that can be topped up at a cash machine. This system completely does away with the administration costs for billing.

HiPath Real Time IP systems guarantee maximum cost efficiency.

The modular HiPath 4000/3000 Real Time IP systems offer you all the advantages of IP-based multimedia communication. To protect your existing investments, HiPath enables the gradual introduction of a convergence solution.

Siemens has it all.

Siemens – because no one has more experience in the medical and healthcare sector.

No other supplier can offer you a comparable range of specific solutions for the healthcare and medical sector. Over and above the communication solutions, we offer you a broad spectrum of medical and building technology solutions.

Siemens offers a comprehensive portfolio of services.

We are among the few suppliers who combine all areas of high technology and associated services under one roof.

HiPath Professional Services

comprise everything from technology consulting to project management.

HiPath Lifecycle Services

accompany your solution throughout its life cycle – from remote monitoring and maintenance to in-house training.

HiPath Managed Services

from network and security management to complete outtasking of communications and easier financing solutions – we save you from having to perform tasks that are not part of your core business.

24-hour on-site service.

Our qualified engineers can reach you in the shortest possible time to clear a fault before the failure of a vital piece of equipment occurs.

It is our aim to make a significant contribution to your success with the development and implementation of a solution. This is only possible if all supplementary services, up to and including maintenance, come from a single source.

» Improved quality and efficiency at Suhl Hospital, Germany «

Following the rebuilding of the largest hospital in the South Thuringia region, every bed was equipped with the Siemens HiMed Cockpit.

One improvement that was regarded as crucial at Suhl was that the installation of the new solution – which is directly connected to the Hospital Information System – now makes all patient records available immediately and securely at the bedside.

Dr. Peter Schneider, deputy managing director of the hospital, expects “that the new solution will not only facilitate better medical documentation without media discontinuities, but will at the same time ensure greater process efficiency and improved quality of patient care”. In addition, the system offers multimedia entertainment for patients, since TV, radio, telephone and Internet are now available via a single device at the patient bed.

Siemens is one of the leading manufacturers of innovative smartcard solutions, without which a modern hospital would be unimaginable, because they simplify administration and combine great flexibility with maximum security.

The Siemens HiMed smartcard – simply secure, simply universal.

A small chip takes over a multitude of time-consuming billing tasks from your administrative staff and reliably secures access both virtually and physically. Your patients have access to the HiMed Cockpit to use services such as telephone, TV, radio, multimedia information, Internet and Intranet and to pay for these directly.

The Siemens HiPath Scurity Card – universal access to electronic patient data.

Your staff can use the HiPath Scurity Card for secure access to the Hospital Information System (HIS). From time and access control to the billing of private telephone calls, the HiPath Scurity Card performs a number of administrative tasks for you. Interfaces also enable the card to be used by staff as a means of payment in the canteen and for the car park.

Hospitals around the world work with HiPath Healthcare Solution HiMed to offer their patients better service and security by means of advanced communication solutions, thereby reducing the workload for their staff.

Your success is the focus of everything we do at **Siemens Communications**. We work together with you to develop powerful communication solutions that help you achieve your business goals. Take advantage of our proven experience, innovation power and implementation skills in all key areas of voice and data communication.

As a leading provider of communication solutions for mobile, fixed and enterprise networks worldwide, we constantly strive to make communication easier and more efficient. Thus we are setting the trends for a communication environment that fosters your success – today and in the future.
