

Siemens and iCAD® are leading the way in breast cancer detection.

Siemens MAMMOMAT® Novation^{DR} and iCAD's Second Look® Digital solution offers a very effective Computer-Aided Detection (CAD) choice for the early detection of breast cancer. With multiple operating points and viewing flexibility, this innovative solution combines state-of-the-art hardware from Siemens with iCAD's leading digital technology and patented algorithms to automatically identify and mark regions commonly associated with cancer. The benefits are:

- **Pinpoints breast cancer earlier** – at the touch of a button
- **Delivers maximum sensitivity and optimal performance** – 90-96% with 2FP's per normal case*
- **Reduces oversight error** – can catch up to 72% of actionable missed cancers
- **Integrates seamlessly into workflow** – with no extra labor
- **Offers reimbursement support** – achieve payback in as little as one year**

iCAD's Second Look Digital solution pinpoints cancer at the touch of a button.

Industry-Leading Performance Drives Results

- Delivers maximum sensitivity and optimal performance – 90-96% with 2FPs per normal case*
- Tailors CAD performance based on multiple operating points

Clear Marking Logic and Digital Viewing Speeds Workflow

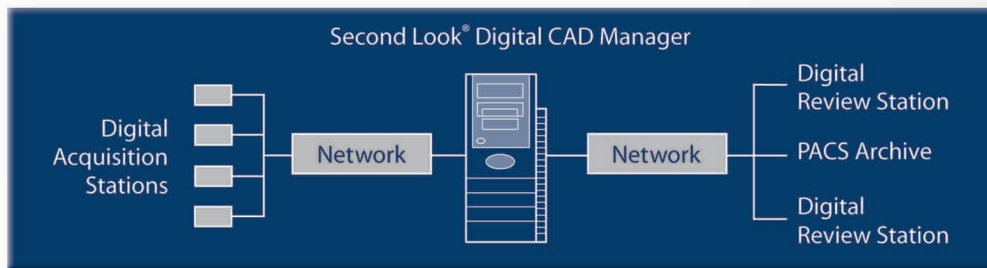

- Automatically identifies and marks regions commonly associated with cancer
- Clearly outlines cancerous regions without obscuring the region of interest for faster, more precise diagnosis
- Generates CAD results for view on Siemens MammoReport^{Plus} breast care workplace

Exceptional Productivity Meets Volume Demands

- Reliably handles up to 30 cases per hour
- Enables priority queuing of cases

Seamless Integration Streamlines Operations

- Integrates easily with existing systems – *deploys within hours, not days or weeks*
- Provides ability to interface multiple review stations into one CAD manager

Reimbursement Support Impacts Bottom Line**

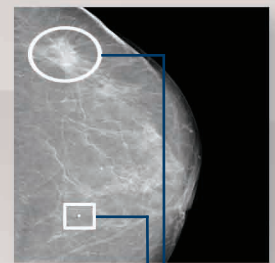

- Affords low breakeven procedure volumes
- Generates surplus revenues over the long term
