14L5BV Transducer

ACUSON S2000™ Automated Breast Volume Scanner (ABVS)

14L5BV Transducer

Frequency Bandwidth:	5.0 – 14.0 MHz
Selectable 2D Frequencies:	7.0, 8.0, 9.0, 10.0, 11.0 MHz
Selectable THI Frequencies:	H12.0 , H14.0 MHz
Number of Elements:	768
Footprint:	154 mm x 168 mm
Array Length:	154 mm
Maximum Field of View:	154 mm x 168 mm
Maximum Display Depth:	60 mm
Line Spacing:	0.175 mm or 0.125 mm
Resolution:	Axial = 0.09 mm; Lateral = 0.16 mm; Sagittal = 0.44 mm
Compatible with:	ACUSON S2000™ ultrasound system
Exam Types:	Breast
Design Attributes:	<ul style="list-style-type: none">• Wide bandwidth linear transducer• Hanafy lens transducer technology

ACUSON S2000 ABVS

- The first multi-use system that automatically, quickly and comfortably surveys and acquires full field volumes of the breast. It provides efficient and comprehensive analysis of the 3D data, and facilitates easy, semi-automated reporting.

3-on-1 Hanging Protocol of a 3D Ultrasound of the Breast

- A simple cyst is clearly visualized in all three planes. The coronal plane demonstrates the simple cyst in relationship to the nipple and pectoralis muscle. (Top: Transverse; Bottom Left: Coronal; Bottom Right: Sagittal)

3-on-1 Hanging Protocol of a 3D Ultrasound of the Breast

- 3-on-1 hanging protocol reveals a spiculated, biopsy-proven invasive ductal carcinoma in all three orthogonal planes. The distortion in the breast parenchyma is nicely demonstrated in the coronal plane (bottom left).

MultiSlice Imaging

- MultiSlice coronal ultrasound images of the breast reveal a biopsy-proven invasive ductal carcinoma. The yellow marker indicates the nipple.

Standalone clinical images may have been cropped to better visualize pathology.

Frequency bandwidth measurements represent bandwidth at ± 20 dB.
