# Faster, Simpler, More Cost-Effective Options for Your Equipment Installation and Construction

## Design & Construction Services

When you have made the decision to invest in new medical equipment, you face the challenge of getting that equipment into service quickly, smoothly, and cost-effectively. At Siemens Medical Solutions USA, Inc. Design and Construction Services (DCS), we specialize in medical facilities construction. From feasibility analysis to on-time and on-budget completion, whether we do the whole project or just a portion, Siemens professionalism and expertise will help save you time and money.

### The DCS Advantages

**Relief:** From concern about construction schedules or problems

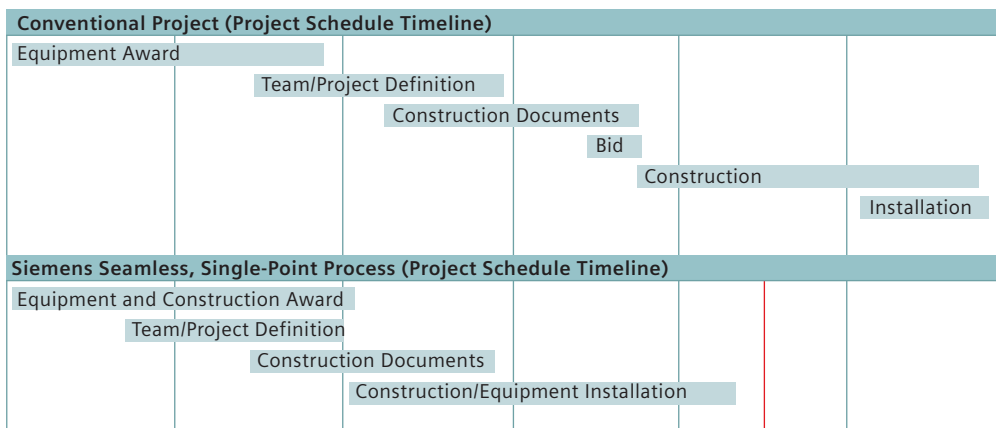

**Trust:** A single point of contact who knows patient-care priorities

For every DCS project, Siemens strives to deliver:

- In-depth expertise for every phase of your project— from long before you have made a purchase decision all the way through final construction
- Elimination of time-consuming steps that often delay construction and installation
- Seamless, fully integrated design/build process
- Condensed overall project schedule
- Reduced demands on your time and resources in construction planning and site development

“We could not be more pleased with the crew that Siemens brought in here. The work is absolutely excellent, whether we are talking about training our people, keeping on schedule, or coordinating with the construction crew. It’s just a great relief to know that it is all being managed.”

Delores Gaiser  
 Manager, Cath Lab  
 Hennepin County Medical Center  
 Minneapolis, MN

## Customizable Options

### DCS Single-Point Process

Siemens’ Single-Point Process can do it all for you by delivering a customized, construction solution, regardless of the complexity of your building program.

Whether your requirements include room modifications, department planning, and renovation, modular construction, or construction of an entirely new facility, you can outsource responsibility to our experts from start to finish.

Siemens’ Single-Point Process changes the nature of construction management. Since every task is tightly coordinated by the same organization, multiple steps can proceed concurrently. We can start working with you long before you’ve

chosen your equipment, helping you identify and address potential site-specific construction issues—such as electrical and mechanical issues—up front, so you know exactly what must be done to accommodate your new equipment. The net result: your ability to focus on patient care and realize the clinical and revenue benefits of your new equipment sooner.

### DCS Services That Complement Your In-House Resources

Many medical institutions prefer to rely on existing resources for key elements of the construction process. Our portfolio enables you to choose from a list of services that will best integrate your capabilities with ours—building the strongest possible team for your project while recognizing your budget constraints.

You can choose from our menu of consultative services to add value wherever you need it:

- Design
- Space planning
- Architecture
- Engineering
- Construction
- Construction management

Our goal is to deliver the most strategic and cost-effective approach that meets all your key objectives.

Whether you choose Single-Point Process or only specific services, we have a proven record of success. Over 97% of our projects have met their deadlines and budget goals.

### **Contact Siemens Design and Construction Today**

If you are ready to begin a project or are in the earliest “needs assessment” stage, you can benefit from our expertise. We’d welcome an opportunity to discuss your project, your site, and your goals. To contact us, call your Siemens Medical Solutions USA, Inc. Account Executive (AE) today.
